Notes:

- *This questionnaire is to be administered when the participant is between 12 months and 4 years of age (up to child's 5th birthday). Questions are designed to be answered by the caretaker.*
- *This questionnaire should be administered before the Childhood Asthma Control Test (CACT) and Patient Oriented Eczema Measure (POEM)*
- *Study staff should emphasize the importance of trying to answer all questions as best the caretaker can, and if the caretaker has questions regarding medical terminology, study staff should provide answers to ensure the caretaker understands the question. If the caretaker is unsure at what age an event occurred, staff are to suggest the caretaker make their best guess from the age range options.*

"The following questions ask about symptoms and conditions related to asthma, wheezing, and cough; respiratory infections and related surgeries; rhinitis; medications for hay fever, allergic rhinitis, allergies in the nose, asthma, wheezing, or cough; eczema (atopic dermatitis); food allergy; and anaphylaxis."

The majority of the questions included in the Airways Questionnaire are very slightly modified (based on changing medical terminology) versions of the validated International Study of Asthma and Allergies in Childhood (ISAAC) questionnaires (developed in Europe). Questions with an asterisk are identical to ISAAC; questions with two asterisks are ISAAC questions that have been modified slightly by adding clarifying words reflecting terms more frequently used in recent years and in the United States or to account for the fact that these questions are not required to be asked on an annual basis. These modifications are highlighted in yellow.
